B.S. Computer Science, Cybersecurity Focus and B.S. Mathematics, UMD | Expected May 2027 | Available Fall 2026

SUMMARY

Cybersecurity-focused CS and Mathematics undergraduate with Security+, regulated IT internship experience, and hands-on projects in vulnerability triage, web security review, access control, and secure software development.

EDUCATION

University of Maryland, College Park

Expected May 2027

B.S. Computer Science (Cybersecurity Focus); B.S. Mathematics; ACES Cybersecurity Minor

Coursework: Penetration Testing, Computer and Network Security, Computer Systems, Algorithms, Programming Languages

CERTIFICATIONS

CompTIA Security+ SY0-701

Issued March 2026; Expires March 2029

TECHNICAL SKILLS

Security: SAST, vulnerability triage, remediation reporting, risk rating, OWASP Top 10 concepts, Burp Suite, Nmap, Wireshark, OpenSSL, Semgrep, Snyk, SonarQube
AppSec/Web: WordPress security, PHP basics, data exposure, authentication flows, authorization, RBAC, secure configuration review, plugin risk, REST APIs, VPS hosting
Programming: Python, Java, C++, Bash, Rust, x86-64 Assembly, OCaml
Systems: Linux, Windows, Git/GitHub, unit testing, debugging, technical documentation

EXPERIENCE

Security Intern, Redmind Technologies

Jun 2026 – Present

- Conduct Semgrep-assisted, non-intrusive security review of a confidential international WordPress/PHP client site, assessing data exposure, authentication flows, admin access, configuration risk, and plugin risk.
- Documented 7 initial findings from the scoped review and translated technical issues into business-risk summaries, remediation guidance, and a WordPress hardening roadmap.
- Created a security slide deck and written report for the developer team, covering assessment scope, prioritized risks, and recommended remediation steps.
- Designing a holistic web security scanner prototype for static and dynamic websites, recurring checks, risk prioritization, and report generation.

New Jersey Courts – Ocean Vicinage | Summer IT Intern

Jun 2025 – Aug 2025

- Supported production IT operations in a regulated court environment, assisting staff across departments with workstation, account, and access-related issues.
- Provisioned and modified user access according to approved requests, applying least-privilege and secure configuration practices.
- Assisted with patching, system updates, configuration changes, and backup/recovery workflows supporting endpoint reliability and operational continuity.

PROJECTS

Static SAST Triage Agent Benchmark

[GitHub](#)

- Built a Python evaluation harness for 296 RealVuln SAST alerts from Semgrep, Snyk, and SonarQube across vulnerable open-source repositories.
- Implemented schema validation, scoring scripts, unit tests, and reproducible workflows to compare true-positive/false-positive triage and remediation reasoning.

Keystroke Dynamics Authentication System

[GitHub](#)

- Built a Flask-based behavioral biometric authentication prototype using keystroke timing features, anomaly detection, and fallback passphrase authentication.
- Implemented feature extraction and classification with NumPy/SciPy to evaluate continuous-authentication behavior and account-takeover detection tradeoffs.
